

## Interplanetary Agreement

signed by the Representatives of the five schools taking part  
in the Erasmus+ project titled "Be the Guardian of the Galaxy Yourself"  
in the following topics:

### POLITICAL LIFE ON THE PLANETS

Parliamentary system: Democracy with influences of Meritocracy  
The Interplanetary Council consists of five members, one from each planet. The representatives are chosen by the population of each respective planet and hold their positions for 4 years at a time. They act as a governing body, but the planets are still governed autonomously. However, the IPC (InterPlanetary Council) has veto to override the planets governing body should one planet choose to act in conflict with the interplanetary legislation.

There is also a supervising agency that checks the IPC to make sure they do not act in their own interest only. The supervising agency is composed of honorary members, from the five planets, who have proved themselves worthy by selfless actions throughout their professional careers.

### EVERYDAY LIFE ON THE PLANETS

Hereby we declare that learning is necessary from birth to death.

**Schools** should be free for everybody. Lessons should be more interesting, interactive, free time, workshops with practical knowledge, usage of technical devices (VR), robot helpers. The school buildings should have solar panels, more outdoor spaces, green areas ensuring children's safety.

**Health care** should be free for everybody concentrating on prevention and people's well being. Every city should have a well equipped hospital. A watch with a QR code for elderly/disabled people for identifying their problems. Avoiding chemicals and using more natural/herbal remedies.

**Food** should be produced locally, zero waste shops, compost, "McHealthy" restaurants – based on Mediterranean diet. Using natural treatments, no chemicals on plants/animals.

**Sports** for everybody and funds for children who can't afford it. Specialized sports centers for disabled people.

**Traffic** may include devices producing energy like "Kinetic tiles".

### ENVIRONMENT

Make more green areas;

Natural fabrics for everyday gadgets;

Place more solar panels and wind turbines;

Build community gardens and parks;

More recycling stations and point system to encourage;

Find other plants to substitute wood;

Natural processed substances instead of chemical fertilizers;

We can't kick out all plastic, but we should take greater steps for a better environment.

### USING TECHNOLOGY IN A SENSIBLE WAY

There should be green scientists and they should try to find every beneficial things for nature.

There should be synthetic trees.

Artificial stars should be our source of energy.

There should be eco-friendly clothes.

There should be teleportation.

It should be tile electricities

There should be virtual reality.

Technology shouldn't use too much electricity.

Teaching children shouldn't use technical devices in the right way.

Developing screen technology shouldn't have bad effects on human body.
